

ClockStudio

Three of my apps in one: Ebb's tides, Stargazer's night sky and WorldClock's time zones, on one launcher entry, with DOWN to move between the faces.

The tide face

The night sky face

The time zones face

3 apps in one

4 faces, a DOWN tap apart

1 launcher entry

0 accounts, network or tracking

The faces

Tides

The next high and low drawn as a curve, with the moon's phase and your steps and active minutes as two arcs. Set one recent high water from a tide table and it does the rest.

Night sky

The whole of tonight: when true dark begins and ends, when the moon is up, and the stretch that is both dark and moonless. A simpler version draws the same night round the rim, with the numbers larger.

Time zones

A big clock with a second city under it, in seven-segment digits. Step through your list underneath; when you travel, hold SELECT for two seconds and the city you are looking at becomes the big clock.

Made to live together

- You choose which faces are in the cycle and in what order; list just two and DOWN becomes a toggle between them.
- Each face names itself for a second as it arrives, and the app opens where you left it.
- Where one high water is not enough, the Config Curator can fit your port's own tide from a NOAA station number or your port's position.
- The night sky faces want one GPS fix to learn your latitude: step outside with it open once and it remembers.
- Settings changed in the phone app take effect on the running app within 20 seconds, with no restart.
- Tapping SELECT does nothing on purpose: the watch lights the screen with that button.

Buttons

DOWN	tap	the next face
UP	tap	step forward; the next city on the zone faces
UP	hold	invert, the wrist light, the info screen
SELECT	hold	the face's alternate; on the zone faces, at 2 s the big clock moves, at 4 s your cities or all
BACK		leave

Not everything the three apps do: four buttons carry four faces, so Ebb, Stargazer and WorldClock each stay better at their one thing.

Free, no accounts, no network, nothing collected.

In the UNA app store. Settings explained at curator.fossistheway.click/#app=clockstudio
