

DialDeck

Five of UNA's own watch faces in one, switched from the phone app in a moment, each with a light version for daylight.

REQUIRES FIRMWARE 1.5.0

Peak

Retro

Analogue, inverted for daylight

5 faces in one

2 settings: the face and invert

20 s for a change to reach the face

0 accounts, network or tracking

Five faces, two settings

Five faces

The example faces UNA published with its SDK, each drawn as its author laid it out: Retro, Peak, Smile, Console and Analogue. Name one in the face setting and the watch shows it.

Dark on light

The invert setting turns any face over for daylight: a light ground with dark digits, hands and rules, and each face's own colours deepened to read on white.

Live from the phone

A watch face has no buttons, so the phone app's Configure form is the only way to change anything. The watch picks up a change within 20 seconds, without restarting anything.

The faces

- Retro: dotted digits, steps, active minutes, heart rate, and a battery that empties in four steps.
- Peak: two goal rings round the rim and a two-colour date, with targets from the watch's own settings.
- Smile: a shaped background and three columns.
- Console: the date in monospace, one sensor and an off-centre clock.
- Analogue: hands over a dial.
- Only what the shown face draws is held open; a face that is not showing costs nothing.

Settings

- Choose DialDeck under Settings, Watch Face
- Face: retro, peak, smile, console or analogue
- Dark on light: any face turned over for daylight
- Set in the phone app: a watch face has no buttons

Firmware 1.5.0 has its own faces with the same names and looks; DialDeck's settings only reach the copies inside DialDeck.

Free, no accounts, no network, nothing collected.

In the UNA app store. Settings explained at curator.fossistheway.click/#app=dialdeck
