

FossIsTheWay

Utilities, watch faces and glances for the UNA Watch, made to work the same way, so the second one you install already feels familiar.

Light on dark

Inverted for daylight

The info page

11 utilities, from the launcher

5 watch faces

2 glances

0 accounts, network or tracking

What the apps share

Invert and light

The faces can be turned over for daylight: dark markings on a light ground, laid out exactly as at night. In the utilities the screen can light when you raise your wrist: never, at night, or always.

The info page

Hold UP for four seconds in most of the utilities for a page of what the app is working from: its version, the battery, counts and timings. Useful when something looks wrong.

Settings, live

Every setting is in the phone app's Configure form. Change one there and the app on the watch picks it up while it runs, without restarting anything.

The Config Curator

- A free web page that walks through every app's settings in plain words and shows exactly what to enter.
- Pick the app, change only what you want: everything else already has a sensible default.
- Already set up? Start from the app's own settings file and change it from there.
- Entirely optional: every app works as it comes, and the curator is there to make things easier.

Buttons, in most utilities

UP	hold	half a second: invert the face
UP	hold	two seconds: the screen light, off, night or always
UP	hold	four seconds: the info page
DOWN	tap	the next page or screen
BACK		leave

A few apps use UP their own way, and watch faces and glances have no buttons: each app's description says how it works.

Free, no accounts, no network, nothing collected.
