

WorldClock

Your time and one other city's at a glance, with the hours between them and the day when it differs. Step through your own list of cities, in a modern or a retro style.

Another city, on another day

The light face

The retro style

56 timezones, one city each

147 airport codes you can type

2 styles: modern or retro

2 button maps: new or Classic

One face, read at a glance

Two times

Your own time large, another city's beneath it with the city's name. Its weekday appears only when it is on a different date to you, and between the two sits the difference in hours, with a moon when it is night there.

The ring

One ring in three parts: today's steps on the left and active minutes on the right, against the goals already set on your watch, and the battery at the bottom. Inside it, a 24-hour dial points to both times.

Modern or retro

Set Face style to retro and the same face is drawn in ClockStudio's style: seven-segment times, dot-matrix lettering, and the ring square-ended in blue, orange and green. Everything else, the buttons included, stays as it is.

Your cities, your time

- Step through your own list of cities, in your order, or through all 56 timezones; a two-second SELECT hold switches between them.
- A short SELECT hold swaps your time with the city's.
- Your own time is the watch's, taken from your phone, or worked out from GPS: HOLD: SET makes the shown city your own.
- While you hold a button, a bar under the city fills and the line names what letting go will do.
- Classic buttons brings back the map WorldClock had before 2.0.
- The screen lights on a wrist raise only between sunset and sunrise where you are, or always, or never; dark text on a light face for daylight.

Buttons

UP, DOWN	tap	step through your cities
UP	hold	invert, the screen light, the info page
SELECT	hold	swap your time with the city's; at 2 s, your cities or all 56
BACK		leave

Free.
